Отчет по практическому заданию №5
«Инструменты разработки мобильных приложений»

Выполнил:

студент группы 381908-4

Рябцев М. В.

Нижний Новгород
2022

Оглавление

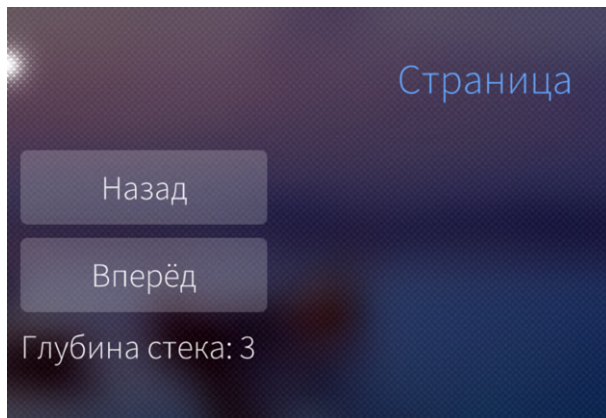

Цель задачи	3
Постановка задачи	4
Описание программной реализации	6
Руководство пользователя	7
Заключение	19
Приложение	20

Цель задачи

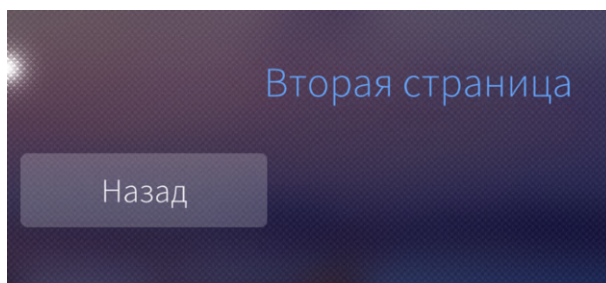

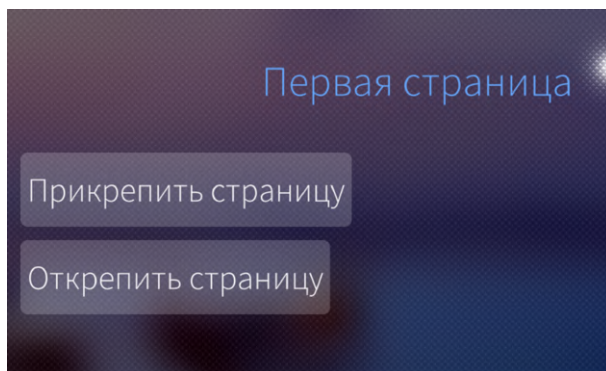

В данном лабораторной работе требуется научиться организовывать многостраничное приложение, использовать контейнеры Silica, вытягиваемые меню и обложку приложения.

Постановка задачи

1. Создать приложение, которое будет отображать страницу с двумя кнопками “Назад” и “Вперёд”. Первая удалит текущую страницу со стека, вторая добавит новую. Также на экране нужно отображать текущую глубину стека.

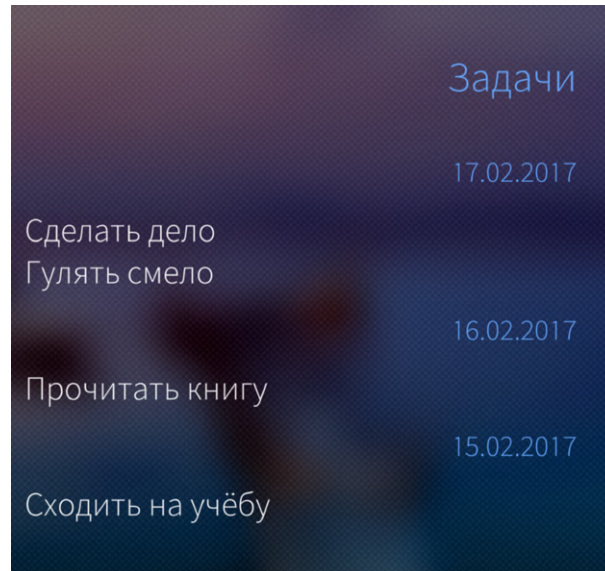

2. Создать приложение из двух страниц. Первая страница содержит две кнопки “Добавить страницу” и “Убрать страницу”. Первая кнопка добавит вторую страницу как прикреплённую, вторая кнопка её удалит. На второй странице должна быть кнопка для возврата на первую страницу без закрытия второй.

3. Создать приложение с одной кнопкой и текстовым полем. После нажатия на кнопку отображается диалог для ввода текста. После согласия с результатом введённый текст отображается в текстовое поле.
4. Создать приложение с одной кнопкой и текстовым полем. После нажатия на кнопку отображается диалог для выбора даты. После согласия с результатом ввода выбранная дата отображается в текстовое поле.

5. Создать приложение с одной кнопкой и текстовым полем. После нажатия на кнопку отображается диалог для выбора времени. После согласия с результатом ввода выбранное время отображается в текстовом поле.
6. Создать приложение со списком **SilicaListView**, из задач на неделю. Задачи должны содержать дату и описание. В списке задачи группировать по датам.

7. Создать приложение с **SilicaWebView** для доступа к вашему любимому сайту.
8. Использовать **SlideshowView** для просмотра и перелистывания задач на неделю. На одном слайде – одна задача.
9. Создать приложение с вытягиваемыми меню сверху и снизу и текстовым полем. После выбора какого-либо элемента меню, его название отобразить в текстовом поле.
10. Создать приложение со списком и контекстным меню. После выбора элемента контекстного меню отобразить в консоли название выбранного элемента меню и индекс элемента списка.
11. Создать приложение с обложной-счётчиком. На обложке отобразить текущий счёт и две кнопки для добавления единицы к счёту и для сброса счётчика.

Описание программной реализации

1. **Добавление страниц и отображение глубины стека**
Глубина стека отображается в **Label** используя *pageStack.depth* для получения значения. *pageStack.push(Qt.resolvedUrl("Page2.qml"))* создает новую страницу, *pageStack.pop()* удаляет страницу из стека.
2. **Прикрепленные страницы**
pageStack.pushAttached(Qt.resolvedUrl("Page2.qml")) прикрепляет страницу, *pageStack.popAttached()* – открепляет.
3. **Диалог для ввода текста**
Чтобы изменять ввод в **TextField**, в **Dialog** используем *onAccepted: field.text = firstTextFieldValue*.
4. **Диалог с календарем**
Чтобы изменять ввод в **TextField**, в **Dialog** используем **DatePickerDialog** с *onAccepted: field.text = date.toString()*.
5. **Диалог с часами**
TimePickerDialog с *onAccepted: field.text = time.toString()*.
6. **Список задач**
Используем **SilicaListView** с **ListModel**.
7. **Браузер**
Используем **SilicaWebView** со свойством *url*.
8. **Слайд-шоу**
Используем **SlideshowView** с **ListModel**.
9. **Вытягиваемые меню**
Используем **SilicaListView** с **PullDownMenu**.
10. **Список с контекстным меню**
Используем **SilicaListView** с **ContextMenu**.
11. **Обложка приложения**
Используем **CoverActionList** с **CoverAction**.

Руководство пользователя

В первом задании пользователю отображается глубина стека.

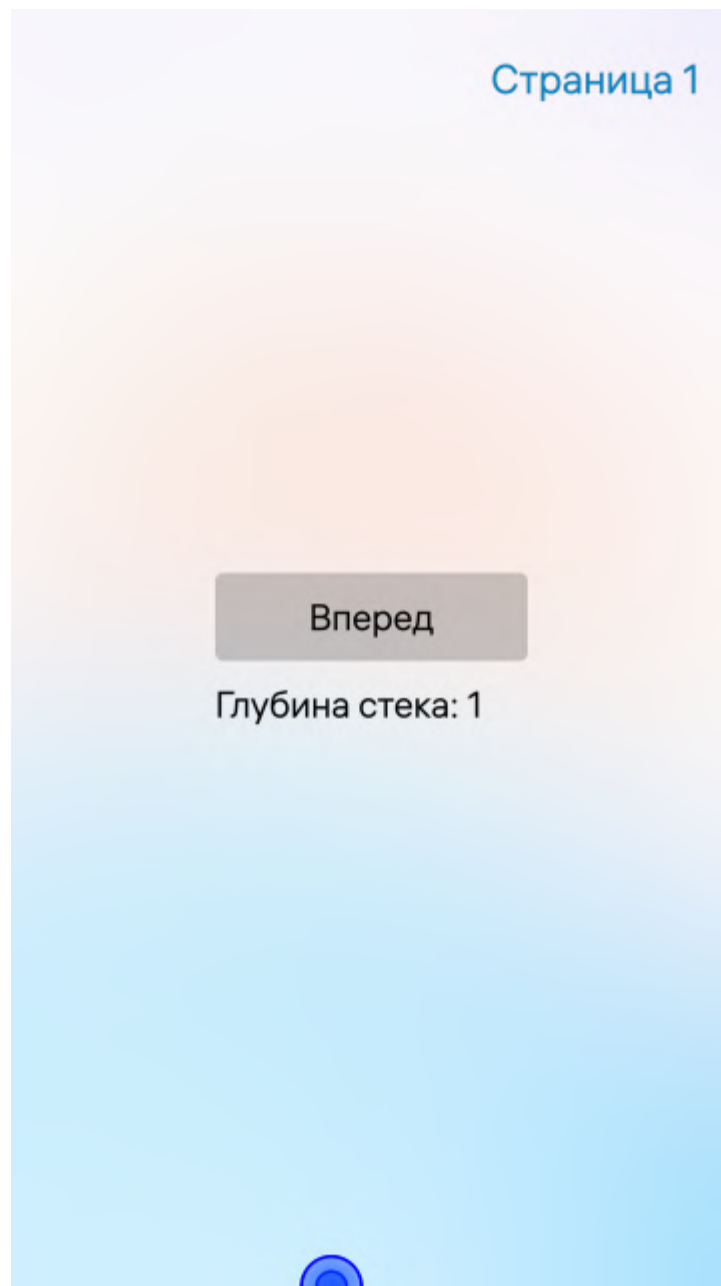

Рис. 1: Глубина стека на первой странице

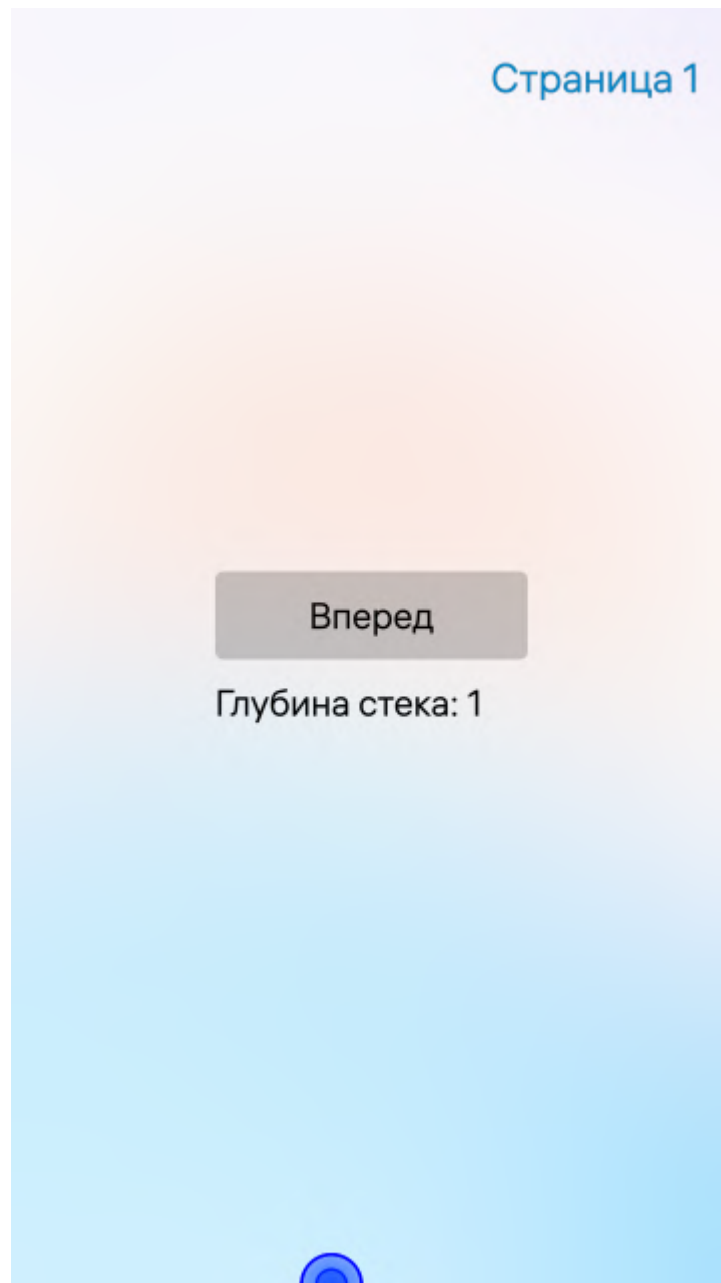

Рис. 2: Глубина стека на второй странице

Во втором задании при нажатии на кнопку прикрепить появляется индикатор перехода на следующую страницу.

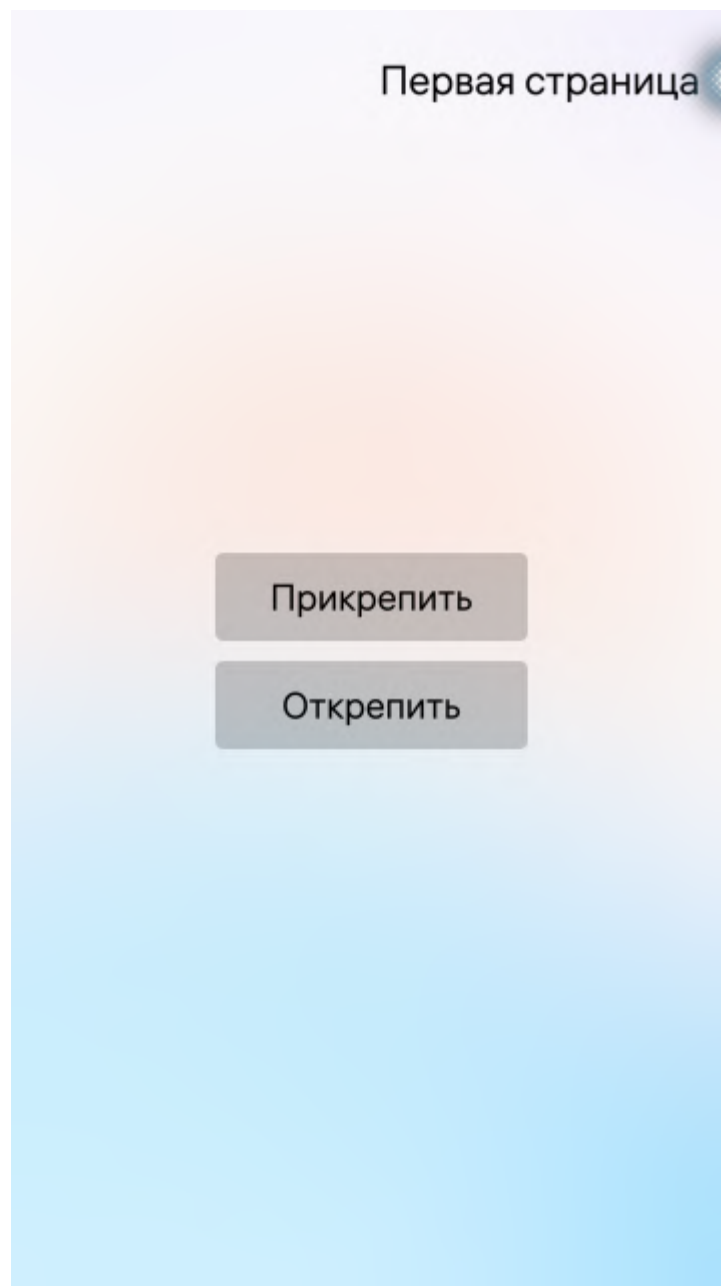

Рис. 3: Прикрепление страницы

В третьем задании ввод в текстовом поле управляется диалогом.

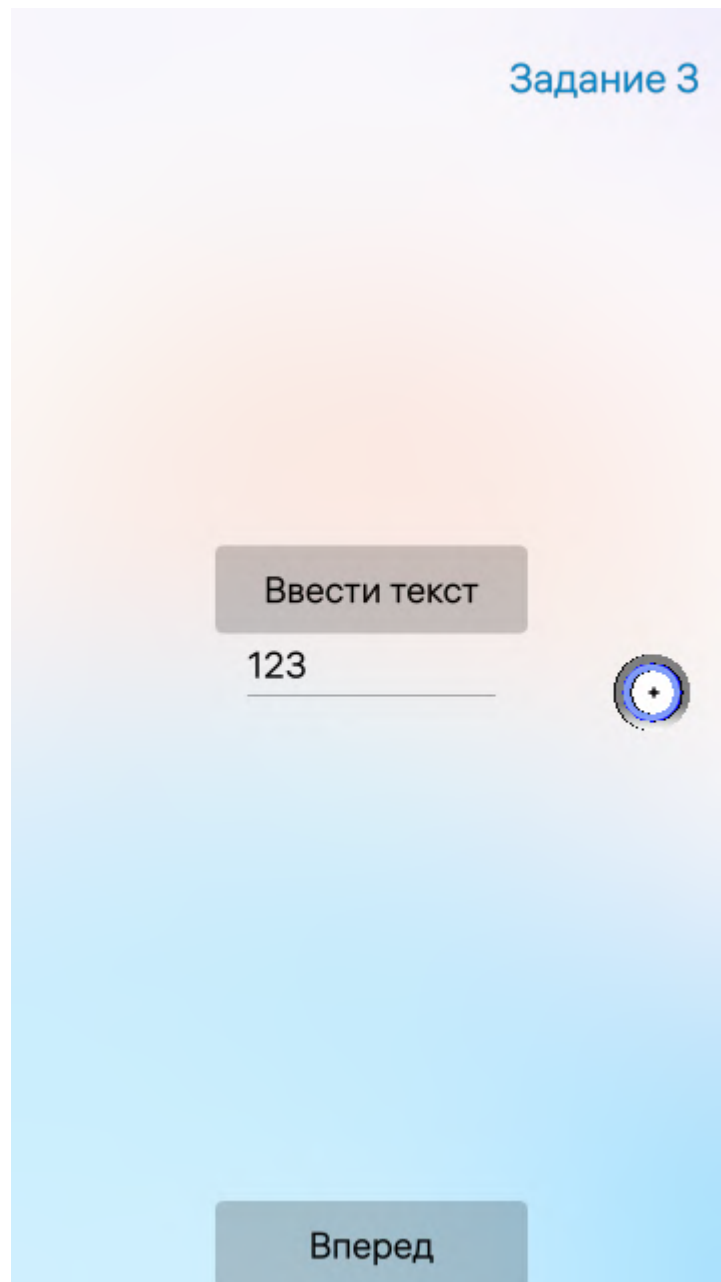

Рис. 4: Текстовое поле

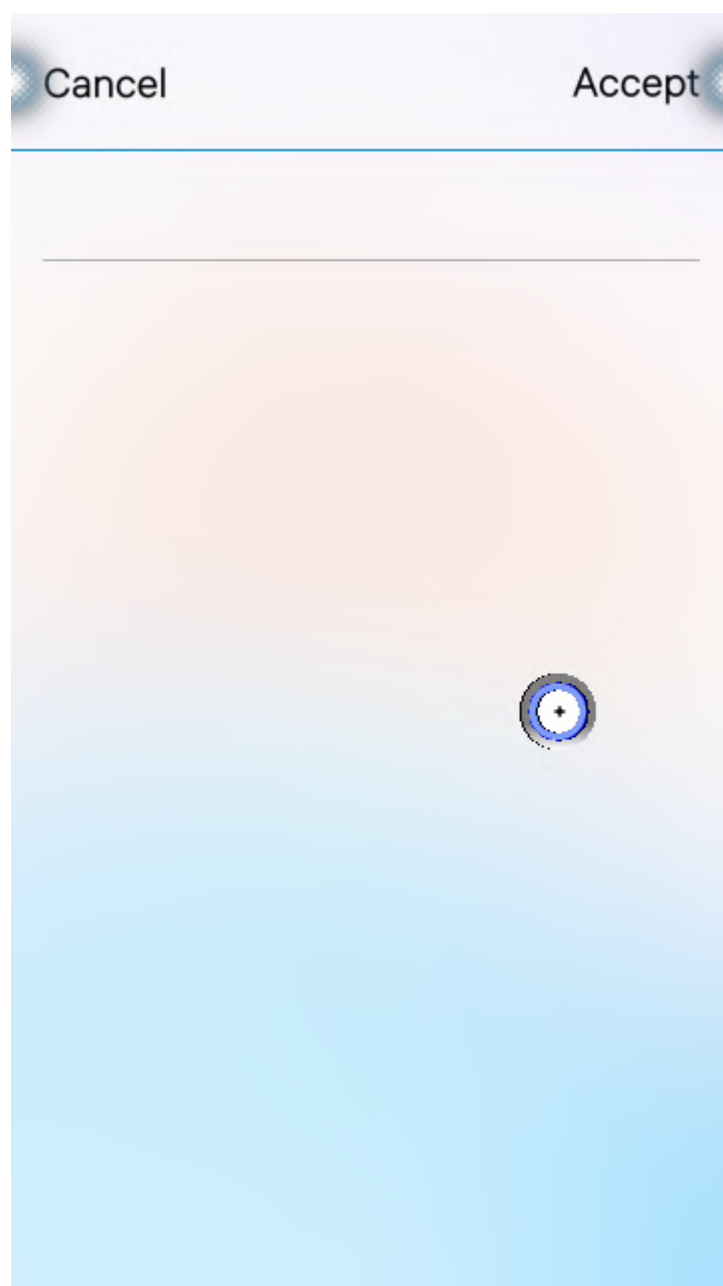

Рис. 5: Диалог ввода текста

В четвертом задании ввод в текстовом поле управляется диалогом выбора даты.

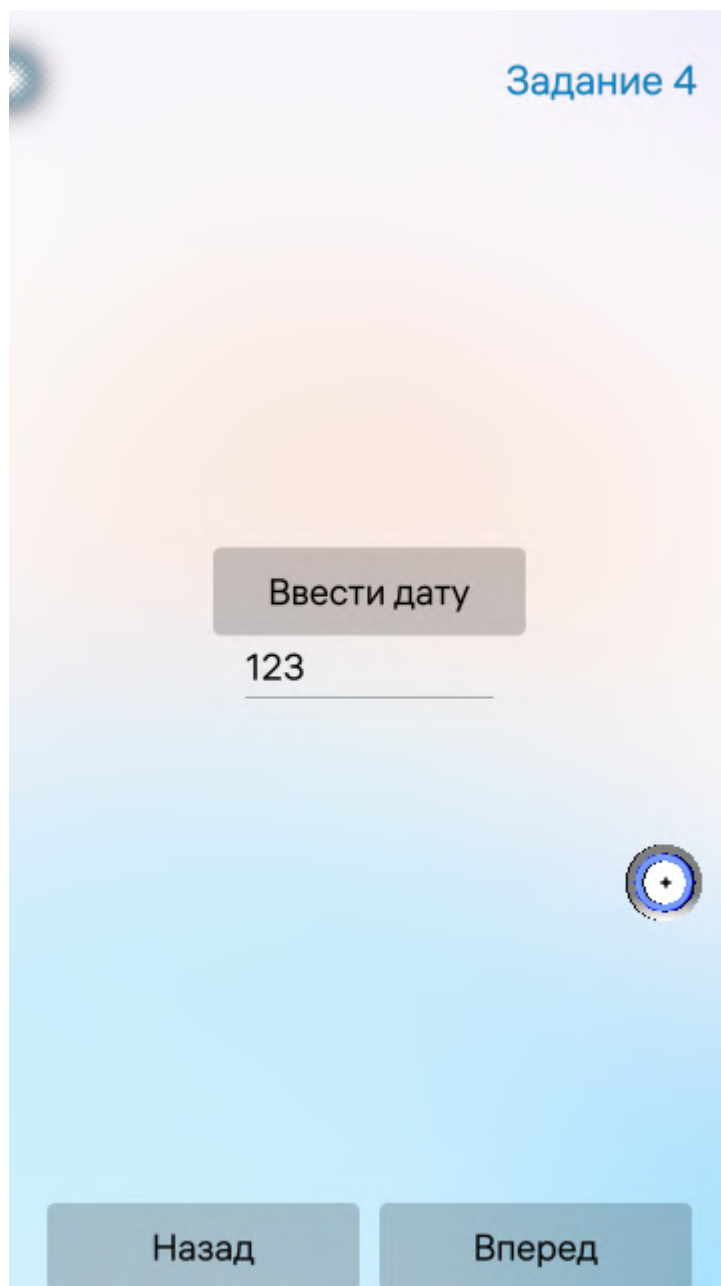

Рис. 6: Текстовое поле

Рис. 7: Диалог ввода даты

В седьмом задании на странице находится браузер.

Рис. 8: Браузер

В восьмом задании список дел отображается как слайд-шоу.

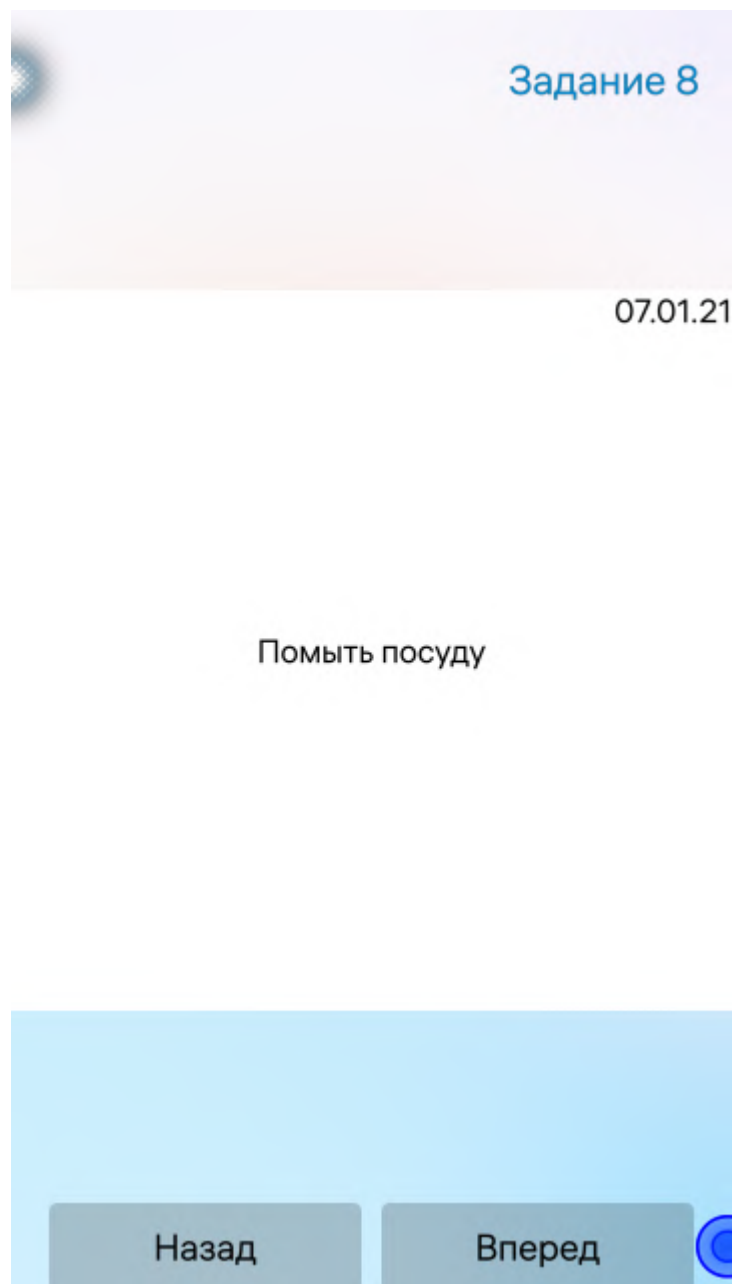

Рис. 9: Слайд-шоу

В девятом задании есть два вытягиваемых меню.

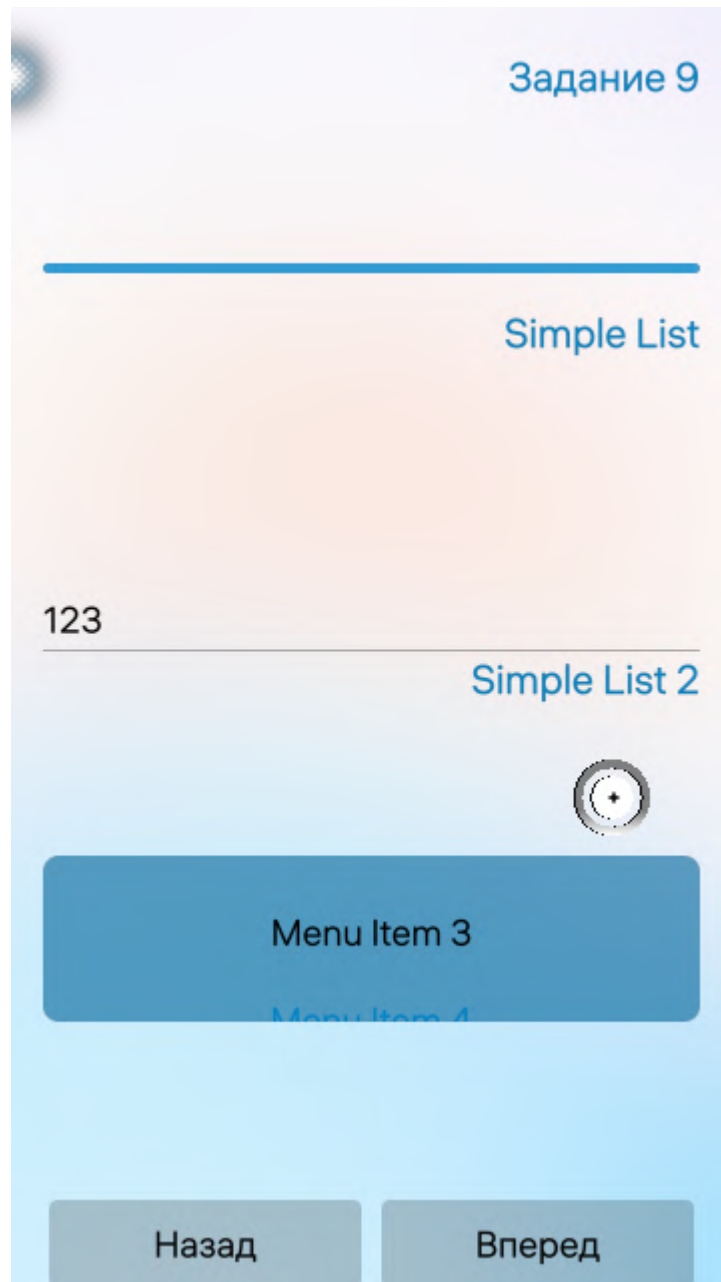

Рис. 10: Вытягиваемые меню

В десятом задании на элементах списка открывается контекстное меню.

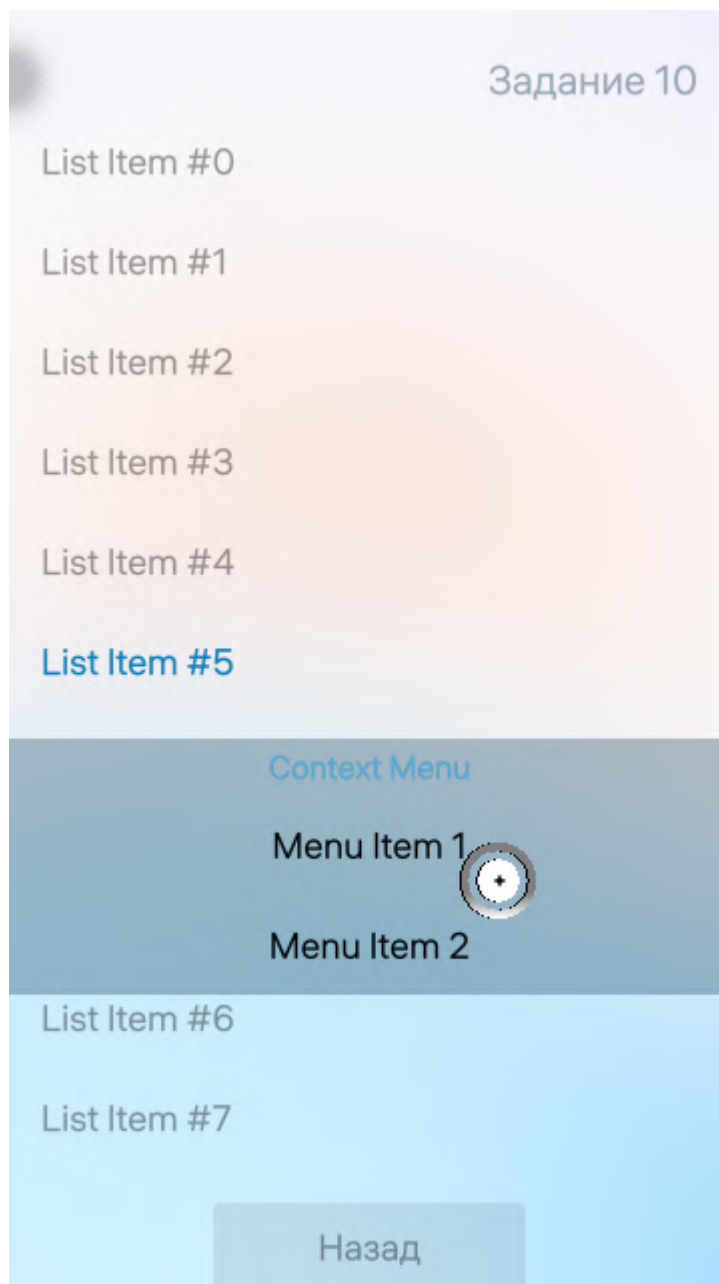

Рис. 11: Контекстное меню

На обложке приложения находится рабочий счетчик.

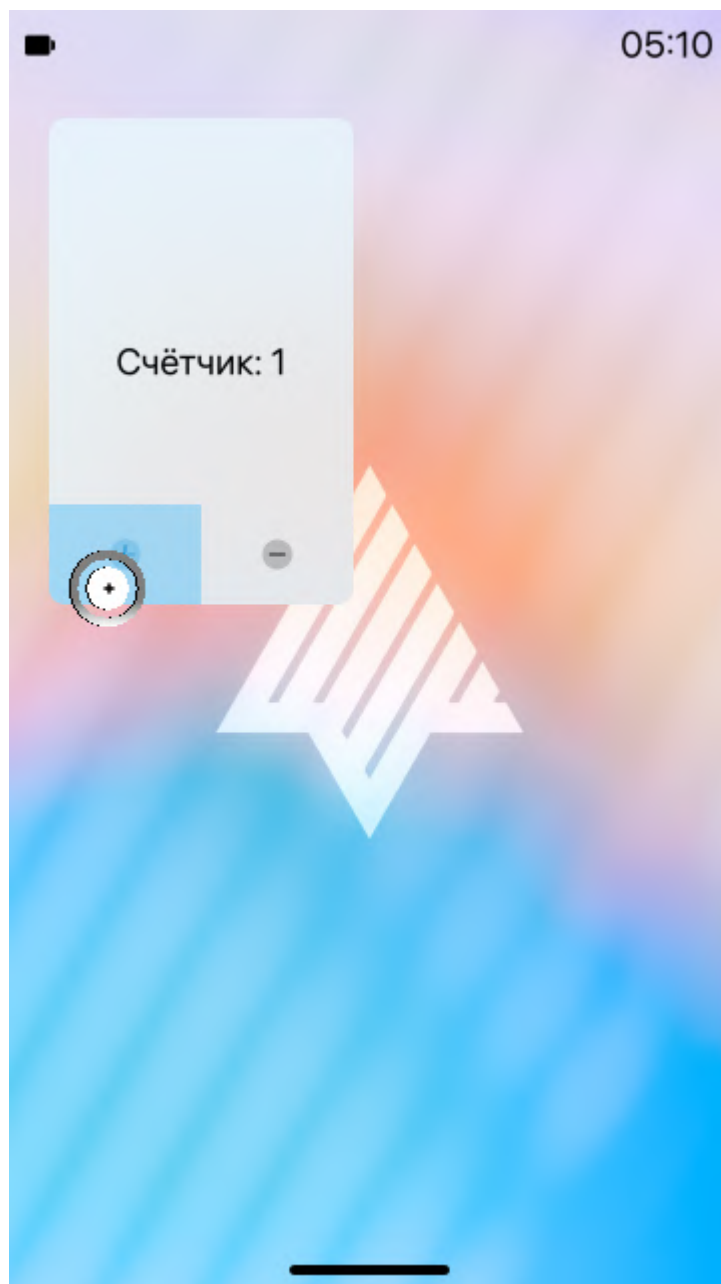

Рис. 12: Обложка

Заключение

В процессе выполнения данной лабораторной работы мы научились организовывать многостраничное приложение, использовать контейнеры Silica, вытягиваемые меню и обложку приложения.
